FOR YOUR CORRESPONDENCE FILE

Bill Owens
Governor

Greg E. Walcher
Executive Director

Michael B. Long
Division Director

The captioned document, dated December 1, 1999, has three additional provisions over those already submitted. I believe the additional provisions plus the proposed frequency of monitoring and the monitoring parameters would be adequate provided the following could be added.

1. Field and lab pH and conductivity should be added to the monitoring parameters.
2. The operator should commit to spraying the freshly deposited CKD with water to promote crystallization and inhibit leaching.

I did not review the HELP model parameters or results. Except for that, I have no other comments and would recommend approval of the TR.
