Re: Fugitive Dust Control Plan For Baghouse Dust Disposal

Dear Mr. Mossberg:

I have reviewed your letter to Robert Jorgenson dated March 9, 1998, regarding your control plan for the old quarry. In addition, I have discussed your letter with Mr. Jorgenson directly. Both Boulder County Health Department and Mr. Jorgenson confer that the plan outlined in your letter referenced above is inadequate to address the activities related to the baghouse dust disposal and the mining activities related to Pit C.

Please submit a written fugitive dust control plan to Boulder County Health Department no later than May 30, 1998. The control plan should include specific methodology to address the areas listed below:

- control of dust from load-out of the bag house;
- control of dust en route to storage/disposal of baghouse dust;
- frequency of baghouse dust disposal on a weekly basis;
- times of dust disposal on a weekly basis;
- control methods for haul roads, including during extremely dry periods;
- methods to ensure baghouse dust is not exposed to the wind after being transferred to the storage pit;
- fugitive dust control of reclamation activity related to pits B/D;
- fugitive dust control of Pit C for mining and baghouse dust storage;
- name and last visible emissions certification date of the person who will monitor the fugitive dust at the plant;
- frequency of monitoring for fugitive dust at the plant;
- record-keeping for fugitive dust controls implemented.

Boulder County Health Department and the Colorado Department of Public Health & Environment will review your plan including proposed methodology for fugitive dust control. Upon approval, Boulder County Health Department will issue the fugitive dust control plan which will become effective within seven (7) business days of approval.

If you have any questions, please feel free to call me at (303) 441-1182.

Sincerely,

Jeffrey J. Zayach
