Cement Kiln Dust (CKD) Testing

Dear Harry:

Erica Crosby's letter of November 7, 2002 requested additional CKD testing in response to the test burn of tires at the cement plant. This letter outlines Cemex's plan to perform that testing.

In 1999, Southdown, Inc. (Cemex's predecessor) extensively tested the CKD. The analyte list from that testing is attached. It proposed that this list of analytes be repeated on two samples, one sample taken just before the test tire burn and one sample taken towards the end of the test tire burn. This will provide three sets of laboratory results over a period of time for comparison purposes.

Concerning soluble organics, we propose to analyze for total organic carbon (TOC). If there is a TOC detection in the tire burn sample we will then analyze the CKD for the following:

Volatile Organic Compounds	(8260)
Semivolatile Organics	(8270)
PCB	(8082)

We will request that laboratory determine Tentatively Identified Compounds (TIC's).

Please let me know as soon as possible if this is acceptable.

Sincerely,

Paul Banks

PB/kj
