RE: Fugitive Dust Control Plan Update

Dear Mr. Mossberg:

The Air Pollution Control Division has received citizen complaints of blowing dust coming from the old quarry area, south of the plant. Our records show the existence of a fugitive dust control plan for this area dated 1984, which was when it was being heavily quarried for production purposes. Since that time, it is our understanding, the quarry has been mostly shut down and is used as a disposal area for baghouse dust. The fugitive dust control plan should be updated to reflect the current uses for this area, namely as a disposal area for the dust.

The updated plan should include methods to control the dust generated by the current uses for the area. The plan should include control methods for haul roads, any remaining open quarry areas, and for the baghouse dust that is disposed in the old quarry. The baghouse dust should not remain exposed to the wind once it has been dumped into the old quarry areas.

The plan should be sent back to the Division by March 13, 1998. If you have any questions please call me at 692-3171.

Sincerely,

A handwritten signature in cursive script that reads "Robert Jorgenson". The signature is written in dark ink and is positioned above the typed name.

Robert Jorgenson
