

12/2/94
meeting
at
OSE
office.

Dove Flats Mine

M-93-041

Ray Krespo, Paul Benis, ⁹⁹⁹Barney Suffington, AGRA, E+E
B. York-Fern ^{water engineer}

Dick Wolfe, Dick Stenzel, Office of State Engineer

- Discussed Ray Krespo's letter responding to OSE's concerns. - + OSE concerns w/ compliance w/ SB120.
- Operation plans to ~~de~~ dewater + put extra H₂O into St. Vrain
- Needs a Dewatering ^{well} Permit (for lowering of groundwater).
- Applicant would like to use CBT water units from the North canal to irrigate the wetlands.

App. has 2500 shares of CBT water - if you don't keep up annual assessment of CBT shares - Ditch Co. takes them back - OSE could get caught w/ need to augment w/ no water shares.

could get band released if get Aug Plan
Krespo proposed that before exposing gw in wetlands area, Southdown will obtain the necessary water

Stop - As long as don't expose any more H₂O than is currently disturbed - Prior to exposing groundwater
Can only expose max size water
- Band to fill in pit where groundwater exposed (if no Augmentation plan). - band for enough

Stop - \$15,000 acre-ft banded by Flatirans for Turnpike Pit
Prior to disturbing 20 ac wetland area must ^{either} band for backfilling area or get Augm't plan to cover evap loss.

- Co. will expose GW in Summer 1995

Applicant
- will get one dewatering permit for each pit
center the permit in middle of entire pits.
