Line 2 (Dup. cols. 1-15 from Line 1)

(NOTE: Columns not shown must be left blank)
(Do not punch Line 2 if column 78 is blank)

Company: <u>Martin Marietta Cement</u>	Inspected by: <u>G. Mathews</u>
Site Location: <u>Lyons</u>	County: <u>Boulder</u>
Contact Person: <u>Roy Cook</u>	Time: <u>2:00 - 4:00</u>
Telephone No.: <u>534 - 4206</u>	EIS Update: <u>NA</u>
Inspection: Routine ☒ Complaint ☐ FA ☐	<u>2.75</u> Hrs.* Permit No. <u>C-12,144</u>
Emission Points Subject to NSPS: <u>NA</u>	

Met w/ Mr. Cook to discuss items of 10/12/83 letter.

1. MMC will submit revised APEN on kiln to reflect actual fuel usages. Approx 1/3 of the oil burned in the kiln is waste oil. Chemical analyses of waste oil are not available. Mr. Cook questioned whether another stack test would be required burning gas or oil. I didn't think so since the test was done on coal, a higher polluting fuel.
2. MMC plans to convert the limestone dryer to coal. MMC needs to file a revised APEN and request for permit modification. Missing production data from previous test can be obtained. Conversion to coal will probably affect the offsets which MMC needs to demonstrate.
3. A-frame curtains: still on order.
Permit and ~~is~~ f.d. control plan for outside clinker storage will be filed. Transfer to hopper may be a problem.
Mr. Cook thinks coal silo baghouse vents to atmosphere, in which case an APEN Worksheet will be filed.

Varter Marietta Cement

2/8/84 inspection report continued

5. Drill rig's dust skirt deficiency was explained.
6. The need for new Emission Permits on new pits south of Hygiene Road was explained. F. d. ~~the~~ control plans for existing and new pits will be submitted.
7. APEN Worksheets explained.
