Hi Dale,

Thank you for the thorough work on the ZON-23-0003 determination. The outpouring of gratitude from the community has been immense, and I want to relay my gratitude for upholding the Land Use Code.

I wanted to provide some additional detail you may find helpful now or down the road.

TL;DR - the increase in trucking from 1998 to 2023 is actually greater than the increase from 2022 to 2023:

- * ~450 ADT in 1998 (Just after Dowe Flats opened and was providing limestone and shale)

- * 593 ADT in 2022 (Before Dowe Flats closed, but was still providing shale)

- * 1283 ADT in 2023 (After Dowe Flats closed)

Key points:

- * As stated in the Dowe Flats hearings, CEMEX effectively ran out of limestone at Dowe Flats in the 2018-2020 time frame.

- * As a result, CEMEX began trucking limestone in from the Weaver Mine, in Laramie Wyoming. CEMEX acquired this mine from the Mountain Cement company in September, 2018. [Here is a link](#) to their Annual Report for the mine which details that **441,615 tons** were mined from Feb 28, 2021 to Feb 27, 2022, and ultimately trucked to the Lyons Plant. At 30 tons per truck, that's 14,720 inbound truck trips per year, or about **+240 ADT**.

- * Given Boulder County's 150 ADT limit, CEMEX should have applied for a Special Use Review when they acquired the Weaver Mine and started trucking in limestone from Wyoming at a **+240 ADT rate**.

- * In 1998, Southdown sent a newsletter to the community (I've attached). In that newsletter, they stated their **average daily truck traffic is less than 75 truck loads per day (75 in + 75 out = 150 truck trips, or 450 ADT)**

Thanks, let me know if you have any questions!

Cheers,
Bart Lorang
