Re: SPR-97-160 Modification Request

Dear Dave,

Land Use staff has reviewed your request to modify the approval of SPR-97-160. Staff understands that the proposed upgrade involves bringing fiber phone service to the equipment shelter at the base of the silos. This fiber will replace the existing copper phone service to the site and will be located underground. Additionally an antenna upgrade is proposed. Currently, there are 3 identical sets of Verizon Wireless antennas at the site. Two sets are up high on the silos, one facing west the other facing north. The third set is on a lower attached building facing east. At this time, Verizon Wireless would like to add 2 new antennas to each existing set of 4. The two new antennas will provide coverage for LTE/4G. Some coaxial cable will also be run between the equipment shelter on the ground and the new antennas.

The Verizon facilities were approved through SPR-97-160 and constructed per BP-97-1785. SPR-97-160 approved the location of three arrays of four antennas (two arrays on the silos and one array on the roof of the upper pack house). In addition, a 6' diameter dish antenna was approved to be located on the roof of the upper pack house and an (12'x 20') equipment shelter to be located on the ground immediately adjacent to the north wall of the pack house. Staff has determined that due to the highly industrial nature of this site and its relative isolation the land use impacts of the additional antenna are insubstantial and with the conditions listed below the proposed modification can be considered minor.

It is unclear to staff why these facilities were permitted through the site plan review process rather than the special use process as is required by the Land Use Code for Telecommunications Facility exceeding the height of the zone district limits. Further changes to this facility may not be considered minor and at such time a special use approval shall be required.

The following conditions shall apply to this minor modification approval:

1. Any vegetated areas disturbed during the upgrade construction shall be revegetated.
2. All antenna support structures and wiring shall be mounted as flush to the silo wall as possible and shall be painted to match the existing structure.
3. A building permit for the project shall be obtained and completed.
4. Documentation of the property owner's approval of this modification shall be provided prior to the issuance of a building permit.

If I may be of further assistance, please call me at 720-494-2641.

Regards,

Hannah L. Hippely, Senior Planner

**Attachments:** DenLyonsDS3LTECdRevB\_091911.pdf

Hannah, I attach the drawing set depicting the proposed site upgrades. There are two main components to this upgrade which will make the site LTE/4G capable. The first I mentioned briefly when we spoke this morning. It involves bringing buried fiber phone service to our equipment shelter at the base of the silos. This fiber will replace the existing copper phone service to the site, providing the greatly increased bandwidth required for 4G/LTE. This is best seen on page A1.0 of the attached drawing set. It will be all underground, no visual impact.

The second component is the antenna upgrade we've been discussing. There are 3 identical sets of Verizon Wireless antennas at the site. Two sets are up high on the silos, one facing West the other facing North. The third set is on a lower attached building facing East. At this time Verizon Wireless would like to add 2 new antennas to each existing set of 4. The two new antennas will provide coverage for LTE/4G. The existing and proposed antenna configurations are best seen on page A2.2 of the attached drawing set. We'll also need to run some additional coaxial cable between our equipment shelter on the ground and the new antennas.

Let me know if there's any additional information you require.

Dave

Hannah,

After we spoke earlier I spoke with my colleague Ann Closser who handled the original zoning for this project in 1997. She had records of pretty much everything she did on this. I attach a letter received by County Planning on 7/31/97. I'll bring the remainder of the information included the original zoning submittal package to our Monday meeting.
