RE: Aerial Photographs, - Lyons Quarry, Permit No. M-77-208; Parrish Quarry,
Permit No. M-77-341✓

Dear Mr. Anderson:

The Division of Minerals and Geology thanks you for your cooperation in reviewing the aerial photographs sent to you earlier this year. Your assistance in highlighting permit boundaries and phasing, as well as identifying both current disturbance and released acreage where appropriate, is appreciated.

Information gathered from your response has been and will continue to be used to verify permit compliance and bonding adequacy.

Sincerely,

Thomas A. Schreiner
Environmental Protection Specialist

Re: Aerial Photographs - Permit No. M-77-341

Dear Mr. Lohr:

Aerial photographs of the Parrish Quarry were taken by the Division on March 2, 1993 to verify permit compliance for your operation. Our goal is to ensure that all mine operators are operating within their permitted areas and that all disturbed areas are adequately bonded for reclamation. Enclosed are the photographs taken on March 2, 1993.

Please review the photographs and indicate to us whether your operation has been properly photographed. If so, use a red marker to highlight the permitted area, and if appropriate, phases of the operation which are currently bonded. In addition, we request your cooperation in determining the number of acres currently disturbed, the number of acres currently bonded, and the number of acres released from reclamation responsibility by the Division.

We apologize for the delay in sending the photos to you. However, your cooperation in this matter is greatly appreciated. Following your response, we will either mail a final inspection report to your office or we will conduct a follow-up field inspection, if necessary.

Please contact me at 866-3567 if you are unable to respond within 30 days.

Sincerely,

X Thomas A. Schreiner
Reclamation Specialist
