DEPARTMENT OF NATURAL RESOURCES
D. Monte Parker, Executive Director

MINED LAND RECLAMATION DIVISION

DAVID C. SHELTON, Director

NOTICE OF INSPECTION AND INSPECTION REPORT

DATE OF INSPECTION: March 10, 1983

OPERATOR CONTACT: Mr. Marvin L. Berg

NAME OF OPERATOR: Martin Marietta Cement

ADDRESS: P.O. Box 529

Lyons, Colorado 80540

RE: FILE NO.: 77-341

MINE: LARIMER COUNTY QUARRY

INSPECTOR: Michael D. Stanton *MS.*

LW
Linda K. Walker

MC
Peter V. O'Connor

(Please note the instructions indicated
by an X to the right)

☒ No problems noted at time of inspection. As a reminder, be sure to file your Annual Report or Notice of Intent to Continue on the Permit Anniversary Date

☐ Possible problem(s) - Note recommendation(s) below to avoid further complications or possible violation(s) at the time of the next inspection.

☐ Possible violation(s) - Note recommendation(s) below the reply to the Division by _____ to avoid enforcement action.

☐ Possible violation(s) pose(s) an immediate threat of harm to the environment, public welfare, or continued operation. Enforcement action forthcoming.

OBSERVATIONS OF IMPORTANCE:

1. The site was inspected with Mr. Marvin Berg and Mr. Jim Leiding.
2. The mining, backfilling and seeding of the mined out quarry areas are proceeding in an orderly and efficient manner.
3. Topsoil is located on the south side of the pit in an unseeded stage. The topsoil will be used to spread over the areas currently being backfilled.

RECOMMENDATIONS (NEXT PAGE)

INSPECTION REPORT

-2-

FILE NO. 77-341

DATE: March 10, 1983

RECOMMENDATIONS:

1. The operator is doing an outstanding job of mining and concurrent reclamation. Our only concern is the high seeding rate of 50 lbs/acre being used. The feels this rate could be reduced while still obtaining satisfactory stands of vegetation.
2. Due to the high velocity winds in the area, it is the staff's recommendation that the topsoil stockpile should be stabilized via seeding. The seed mixture does not have to be the permanent seed mixture used but a perennial grass (eg.: Smooth brome) and an inoculated legume (eg.: Alfalfa).
